Electrical Installation Certificate

Unique Certificate No. DJMBS-000020-EIC

To comply with:

BS 7671: 2018 (Amendment 1: 2020)
Requirement for Electrical Installations
IET Wiring Regulations Eighteenth Edition

The Old Rectory

Flat 8
Vicarage Lane
Felpham
Bognor Regis
West Sussex
PO22 7EA

Completion of electrical works undertaken for: Mr John ware

Electrical installation completed: 06 November 2021

Electrical installation undertaken by:

D J M Building Services

55 Halewick Lane Sompting West Sussex BN15 0ND

Contents of the Report

- 1. EIC Certificate
- 3. Schedule Of inspections
- Distribution Board Schedules Including Circuit Details and Test Results
- 9. Notes For Recipients

Unique Certificate No. DJMBS-000020-EIC

ELECTRICAL INSTALLATION CERTIFICATE

This safety certificate is an important and valuable

comment which should be retained for future reference Issued in accordance with BS 7671 - Requirements for Electrical Installations

DETAILS OF										
Client:	Mr John Ware	Contract Ref (if any):								
Address:										
Sussex Masonic Hou	sing LTD, 5 Hadrian Avenue, Southwick, West Sus	sex, BN42 4LJ								
INSTALLATIO	N ADDRESS									
Address:										
The Old Rectory, Flat	8, Vicarage Lane, Felpham , Bognor Regis, West S	Sussex, PO22 7EA								
DESCRIPTION	N AND EXTENT OF THE INSTAL	LATION								
Description Of installa	ation: Domestic	Installation type	New installation							
Extent of electrical wo	orks covered by this certificate:									
Whole flat rewire. Nev	w consumer units.									
Risk assessment for e	electrical works covered by this certificate:									
None.										
FOR DESIGN										
described above, hav addition or alteration, responsible is to the b	I/We being the person(s) responsible for the design of the electrical installation (as indicated by my/our signatures below), particulars of which are described above, having exercised reasonable skill and care when carrying out the design, and additionally where this certificate applies to an addition or alteration, the safety of the existing installation is not impaired, hereby CERTIFY that the design work for which I/We have been responsible is to the best of my/our knowledge and belief in accordance with BS 7671: 2018 (Amendment 1: 2020), except for the departures, if any, detailed as follows.									
Name	David Mitchell	For & on behalf of:	D J M Building Services							
Position	Owner		55 Halewick Lane							
Date	06 November 2021	A .l.l	Sompting West Sussex							
Signature	Do wife.	Address:	BN15 0ND 01903 750058 daye62@me.com							
Details of departures	from BS 7671									
Sockets below 450 m	m.									
FOR CONSTR	UCTION									
described above, hav which I have been res departures, if any, de		ing out the construction in accordance with BS	n, hereby CERTIFY that the construction work for 7671: 2018 (Amendment 1: 2020), except for the							
_	of the signatory is limited to the work described abo David Mitchell	•	D J M Building Services							
Position		r or & orr benan or.	55 Halewick Lane							
	Owner		Sompting							
Date	06 November 2021	Address:	West Sussex BN15 0ND							
Signature	Do W.		01903 750058 dave62@me.com							
Details of departures	from BS 7671									
Sockets below 450 m	m.									

FOR INSPECTION & TESTING

I being the person responsible for the inspection & testing of the electrical installation (as indicated by my signature below), particulars of which are described above, having exercised reasonable skill and care when carrying out the inspection & testing, hereby CERTIFY that the work for which I have been responsible is to the best of my knowledge and belief in accordance with BS 7671: 2018 (Amendment 1: 2020), except for the departures, if any, detailed as follows.

The extent of liability of the signatory is limited to the work described above as the subject of this certificate

Name David Mitchell For & on behalf of: D J M Building Services

Position Owner 55 Halewick Lane Sompting West Sussex BN15 0ND 01903 750058

Signature U1903 750058 dave62@me.com
Enrolment No.: Branch No.: Accredited Body: NICEIC

Details of departures from BS 7671

None. L

Means of earthing

NEXT INSPECTION

It is recommended that the installation is further inspected & tested:

before 06 November 2026 or change of tenancy

55 A

COMMENTS ON THE EXISTING INSTALLATION

Lights have remote switching units caution too be taken when carrying out insulation test. Receivers are in lights except bathroom one which is in trunking above door of utility room.

Schedule Of inspections

If the tested item applies to a particular board or circuit, this is shown in the 'Location' column. Further detail can be found in the 'Observations' section.

7.5 Suitability of enclosure(s) for IP and fire ratings (416.2, 421.1.6, 421.1.201, & 526.5) 7.6 Protection against mechanical damage where cables enter equipment (522.8.1, 522.8.5, & 522.8.11) 7.7 Confirmation that ALL conductor connections are correctly located in terminals and are tight and secure (526.1) 7.8 Avoidance of heating effects when cables enter ferromagnetic enclosures e.g. steel (521.5) 7.9 Selection of correct type and ratings of circuit protective devices for overcurrent and fault protection (411.3.2, 411.4, 411.5, 411.6 & Sections 432, 433, & 537.3.1.1) 7.10.1 Presence of appropriate circuit charts, warning and other notices - Provision of circuit charts/schedules or equivalent forms of information (514.9) 7.10.2 Presence of appropriate circuit charts, warning and other notices - Warning notice of method of isolation	7.3	Presence of linked main switch(s) (462.1.201)	✓
7.6 Protection against mechanical damage where cables enter equipment (522.8.1, 522.8.5, & 522.8.11) 7.7 Confirmation that ALL conductor connections are correctly located in terminals and are tight and secure (526.1) 7.8 Avoidance of heating effects when cables enter ferromagnetic enclosures e.g. steel (521.5) 7.9 Selection of correct type and ratings of circuit protective devices for overcurrent and fault protection (411.3.2, 411.4, 411.5, 411.6 & Sections 432, 433, & 537.3.1.1) 7.10.1 Presence of appropriate circuit charts, warning and other notices - Provision of circuit charts/schedules or equivalent forms of information (514.9) 7.10.2 Presence of appropriate circuit charts, warning and other notices - Warning notice of method of isolation	7.4	Isolators, for every circuit or group of circuits and all items of electrical equipment (462.2)	✓
7.7 Confirmation that ALL conductor connections are correctly located in terminals and are tight and secure (526.1) 7.8 Avoidance of heating effects when cables enter ferromagnetic enclosures e.g. steel (521.5) 7.9 Selection of correct type and ratings of circuit protective devices for overcurrent and fault protection (411.3.2, 411.4, 411.5, 411.6 & Sections 432, 433, & 537.3.1.1) 7.10.1 Presence of appropriate circuit charts, warning and other notices - Provision of circuit charts/schedules or equivalent forms of information (514.9) 7.10.2 Presence of appropriate circuit charts, warning and other notices - Warning notice of method of isolation	7.5	Suitability of enclosure(s) for IP and fire ratings (416.2, 421.1.6, 421.1.201, & 526.5)	✓
7.8 Avoidance of heating effects when cables enter ferromagnetic enclosures e.g. steel (521.5) 7.9 Selection of correct type and ratings of circuit protective devices for overcurrent and fault protection (411.3.2, 411.4, 411.5, 411.6 & Sections 432, 433, & 537.3.1.1) 7.10.1 Presence of appropriate circuit charts, warning and other notices - Provision of circuit charts/schedules or equivalent forms of information (514.9) Presence of appropriate circuit charts, warning and other notices - Warning notice of method of isolation	7.6	Protection against mechanical damage where cables enter equipment (522.8.1, 522.8.5, & 522.8.11)	✓
7.9 Selection of correct type and ratings of circuit protective devices for overcurrent and fault protection (411.3.2, 411.4, 411.5, 411.6 & Sections 432, 433, & 537.3.1.1) 7.10.1 Presence of appropriate circuit charts, warning and other notices - Provision of circuit charts/schedules or equivalent forms of information (514.9) Presence of appropriate circuit charts, warning and other notices - Warning notice of method of isolation	7.7		✓
7.10.1 Presence of appropriate circuit charts, warning and other notices - Provision of circuit charts/schedules or equivalent forms of information (514.9) Presence of appropriate circuit charts, warning and other notices - Warning notice of method of isolation	7.8	Avoidance of heating effects when cables enter ferromagnetic enclosures e.g. steel (521.5)	✓
equivalent forms of information (514.9) Presence of appropriate circuit charts, warning and other notices - Warning notice of method of isolation	7.9		✓
7.10.2 Presence of appropriate circuit charts, warning and other notices - Warning notice of method of isolation where live parts not capable of being isolated by a single device (514.11)	7.10.1	Presence of appropriate circuit charts, warning and other notices - Provision of circuit charts/schedules or equivalent forms of information (514.9)	✓
	7.10.2	Presence of appropriate circuit charts, warning and other notices - Warning notice of method of isolation where live parts not capable of being isolated by a single device (514.11)	√

Item No	Description	Outcome
7.10.3	Presence of appropriate circuit charts, warning and other notices - Periodic inspection and testing notice (514.12.1)	✓
7.10.4	Presence of appropriate circuit charts, warning and other notices - RCD six-monthly test notice; where required (514.1 2.2)	✓
7.10.5	Presence of appropriate circuit charts, warning and other notices: AFDD six-monthly test notice; where required	N/A
7.10.6	Presence of appropriate circuit charts, warning and other notices - Warning notice of non-standard (mixed) colours and conductors present (514.14)	N/A
7.11	Presence of labels to indicate the purpose of switchgear and protective devices (514.1.1, & 514.8)	✓
8.0 Circu	uits	
8.1	Adequacy of conductors for current-carrying capacity with regard to type and nature of the installation (Section 523)	✓
8.2	Cable installation methods suitable for the location(s) and external influences (Section 522)	✓
8.3	Segregation/separation of Band I (ELV) and Band II (LV circuits, and electrical and non-electrical services (528)	✓
8.4	Cables correctly erected and supported throughout, with protection against abrasion (Sections 521 & 522)	✓
8.5	Provision of fire barriers, sealing arrangements where necessary (527.2)	✓
8.6	Non-sheathed cables enclosed throughout in conduit, ducting or trunking (521.10.1, & 526.8)	N/A
8.8	Conductors correctly identified by colour, lettering or numbering (Section 514)	✓
8.9	Presence, adequacy and correct termination of protective conductors (411.3.1.1, & 543.1)	✓
8.10	Cables and conductors correctly connected, enclosed and with no undue mechanical strain (Section 526)	✓
8.11	No basic insulation of a conductor visible outside enclosure (526.8)	✓
8.12	Single-pole devices for switching or protection in line conductors only (132.14.1, 530.3.3, & 643.6)	✓
8.13	Accessories not damaged, securely fixed, correctly connected, suitable for external influences (134.1.1, 512.2, & Section 526)	✓
8.14.1	Provision of additional protection by RCD not exceeding 30mA - Socket-outlets rated at 32A or less, unless exempt (411.3.3)	✓
8.14.2	Provision of additional protection by RCD not exceeding 30mA - Supplies for mobile equipment with a current rating not exceeding 32A for use outdoors (411.3.3)	N/A
8.14.3	Provision of additional protection by RCD not exceeding 30mA - Cables concealed in walls at a depth of less than 50mm (522.6.202, & 522.6.203)	✓
8.14.4	Provision of additional protection by RCD not exceeding 30mA - Cables concealed in walls / partitions containing metal parts regardless of depth (522.6.202, & 522.6.203)	✓
8.14.5	Provision of additional protection/requirements by RCD not exceeding 30mA - Final circuits supplying luminaires within domestic (household) premises (411.3.4)	✓
8.15.1	Presence of appropriate devices for isolation and switching correctly located including - Means of switching off for mechanical maintenance (Section 464 & 537.3.2)	✓
8.15.2	Presence of appropriate devices for isolation and switching correctly located including - Emergency switching (465.1, & 537.3.3)	✓
8.15.3	Presence of appropriate devices for isolation and switching correctly located including - Functional switching, for controls of parts of the installation and current-using equipment (463.1, & 537.3.1)	✓
8.15.4	Presence of appropriate devices for isolation and switching correctly located including - Firefighter's switches (537.4)	N/A
8.	Circuits - additional information	
	ent-Using Equipment (Permanently Connected)	
9.1	Equipment not damaged, securely fixed and suitable for external influences (134.1.1, 416.2, & 512.2)	✓
9.2	Provision of overload and/or undervoltage protection e.g. for rotating machines, if required (Sections 445, 552)	N/A
9.3	Installed to minimize the build-up of heat and restrict the spread of fire (421.1.4 & 559.4.1)	✓
9.4	Adequacy of working space. Accessibility to equipment (132.12 & 513.1)	✓
10.0 Loc	ation(s) Containing a Bath or Shower (Section 701)	
10.1	30 mA RCD protection for all LV circuits, equipment suitable for the zones, supplementary bonding (where required) etc	✓
11.0 Oth	er Part 7 Special Installations or Locations	
11.1	List all other special installations or locations present, if any. (Record separately the results of particular inspections applied)	N/A

Electrical Installation Certificate

Guidance for Recipients [to be appended to the Certificate)

This safety Certificate has been issued to confirm that the electrical installation work to which it relates has been design ed, constructed, inspected and tested in accordance with British Standard 7671 (the IET Wiring Regulations).

You should have received an 'original' Certificate and the contractor should have retained a duplicate. If you were the person ordering the work, but not the owner of the installation, you should pass this Certificate, or a full copy of it including the schedules, immediately to the owner.

The "original" Certificate should be retained in a safe place and be shown to any person inspecting or undertaking further work on the electrical installation in the future. If you later vacate the property, this Certificate will demonstrate to the new owner that the electrical installation complied with the requirements of British Standard BS 7671 at the time the Certificate was issued. The Construction (Design and Management) Regulations require that, for a project covered by those Regulations, a copy of this Certificate, together with schedules, is included in the project health and safety documentation.

For safety reasons, the electrical installation will need to be inspected at appropriate intervals by a skilled person or persons, competent in such work. The maximum time interval recommended before the next inspection is stated on Page 1 under NEXT INSPECTION'.

This Certificate is intended to be issued only for a new electrical installation or for new work associated with an addition or alteration to an existing installation. It should not have been issued for the inspection and testing of an existing electrical installation. An 'Electrical Installation Condition Report' should be issued for such an inspection.

This Certificate is only valid if accompanied by the Schedule of Inspections and the Schedule(s) of Test Results.

British Standard (BS)

British Standard BS 7671: 2018 Amendment 1: 2020 – also known as the IET (Institution of Engineering & Technology) Wiring Regulations (18th Edition) - Requirements for Electrical Installations is the standard against which all electrical installations are assessed.

Certificate

Any electrician installing a new electrical installation (including a single circuit), altering, extending or adapting an existing circuit should issue to their client, or the homeowner, an Electrical Installation Certificate (EIC), or a Minor Electrical Installation Works Certificate (MEW) to confirm the work complies with the requirements of BS 7671 Appendix 6

Circuit

An assembly of electrical equipment (socket outlets, lighting points and switches) supplied from the same origin and protected against overcurrent by the same protective device(s).

Class I Equipment

Equipment in which protection against electric shock does not rely on basic insulation only, but which includes means for the connection of exposed-conductive-parts to a protective conductor in the fixed wiring of the installation. Class I equipment has exposed metallic parts, e.g. the metallic enclosure of washing machine.

Class II Equipment

Class II equipment, such as music systems, television and video players, in which protection against electric shock does not rely on basic insulation only, but in which additional safety precautions such as supplementary insulation are provided, there being no provision for the connection of exposed metalwork of the equipment to a protective conductor, and no reliance upon precautions to be taken in the fixed wiring of the installation.

Class III Equipment

Equipment, for example for medical use, in which protection against electric shock relies on supply at SELV (Safety extra low voltage) and in which voltages higher than those of SELV are not generated. Class III equipment must be supplied from a safety isolating transformer.

Consumer Unit (also known as a fuse board, or distribution board)

A type of distribution board (principally for domestic premises) comprising a co-ordinated assembly for the control and distribution of electrical energy, incorporating manual means of double-pole isolation on the incoming circuit(s) and an assembly of one or more fuses, circuit-breakers, residual current operated devices or signalling and other devices purposely manufactured for such use.

Distribution Board

An assembly containing switching or protective devices (e.g. fuses, circuit-breakers, residual current operated devices) associated with one or more outgoing circuits fed from one or more incoming circuits, together with terminals for the neutral and protective circuit conductors. It may also include signalling and other control devices. Means of isolation may be included in the board or may be provided separately.

Electrical Installation

Any assembly of electrical equipment supplied by a common source to fulfil a specific purpose.

EICR – Electrical Installation Condition Report

An electrical survey, known as an Electrical Installation Condition Report (EICR) will reveal if electrical circuits are overloaded, find potential hazards in the installation, identify defective DIY work, highlight any lack of earthing or bonding and carry out tests on the fixed wiring of the installation. The report will establish the overall condition of all the electrics and state whether it is satisfactory for continued use and should detail any work that might need to be done.

Electrical Safety Regulations

Registered electricians have already helped to improve the standard of electrical work in the UK. A new electrical safety law, often referred to as Part P (of the Building Regulations), has further enhanced the protection of homeowners and reduced the risk of electric shock when using electricity. The law, which applies to England and Wales aims to improve electrical safety in the home and prevent the number of accidents, which are caused by faulty electrical work. The law requires an electrician registered with a government-approved scheme, such as the NICEIC/ECA/NAPIT/ELECSA/STROMA etc., to carry out most electrical work in the home. After completion of any work, your registered electrician will issue you with a Building Regulations Compliance Certificate to prove it meets the required standards of Part P. You can only carry out electrical work yourself if you can inspect and test that it is safe for use. To comply with the law, you must notify your local building control office before you begin any work and pay the appropriate fee for them to inspect the work.

Extension Leads

An extension cable, also known as a power extender, extension cord or an extension lead, is a length of flexible electrical power cable or flex with a plug on one end and one or more sockets on the other end - usually of the same type as the plug. However, use of extension leads should be avoided where possible, as there is a chance of overloading the circuit.

Miniature Circuit Breaker

A device capable of making, carrying and breaking normal load currents, and making and automatically breaking under predetermined conditions, abnormal currents such as short-circuit currents. It is usually required to operate infrequently, although some types are suitable for frequent operation.

Moulded Case Circuit Breaker

A device capable of making, carrying, and breaking normal load currents, and making and automatically breaking under predetermined conditions abnormal currents such as short-circuit currents. It is usually required to operate infrequently, although some types are suitable for frequent operation. It is meant for higher rated current and is commonly used in Industrial applications. It's usual range is 250A-800A.

Overcurrent

Electrical current (in amps) that exceeds the maximum limit of a circuit. May result in risk of fire or shock from insulation damaged from heat generated by overcurrent condition.

Part P

The specific section of the Building Regulations for England and Wales that relates to electrical installations in domestic properties. Part P provides safety regulations to protect householders and requires most domestic electrical work to be carried out by government-registered electricians, or to be inspected by Building Control officers.

PAT - Portable Appliance Testing

Inspection and testing of electrical equipment including portable appliances, moveable equipment, hand held appliances, stationary equipment, fixed equipment/appliances, IT equipment and extension leads.

PLI - Public Liability Insurance

Broad term for insurance which covers liability exposures for individuals and business owners. Homeowners should check that their electrician has public liability insurance, which covers them if someone is accidentally injured by them or their business operation. It will also cover them if they damage your property while on business. The cover should include any legal fees and expenses which result from any claim by you. Homeowners looking to employ trades people to undertake work on their homes should ensure the companies selected have suitable cover – minimum recommendation is £2 million.

Portable equipment

Electrical equipment which is less than 18 kg in mass and is intended to be moved while in operation or which can easily be moved from one place to another, such as a toaster, food mixer, vacuum cleaner, fan heater.

Prospective fault current

The value of overcurrent at a given point in a circuit resulting from a fault between live conductors, or a live conductor and earth.

RCD - Residual Current Device

Residual current device is a safety device that switches off the electricity automatically when it detects an earth fault, providing protection against electric shock (only when rated at 30mA or less).

Ring Final Circuit

A final circuit connected in the form of a ring and connected to a single point of supply.

Voltages:

SELV

Separated Extra-Low Voltage. An extra-low voltage system, which is electrically separated from Earth and from other systems in such a way that a single fault cannot give rise to the risk of electric shock.

Extra-Low Voltage

Normally not exceeding 50 V ac or 120 V ripple-free dc whether between conductors or to earth.

Low Voltage

Low Voltage (50V - 1000V)

mA

Milliamp or 1/1000 part of an amp (0.001 amp)
